

3.5 Functions

The definition of *function* can be obtained from set theory in this way.

Definition 3.140. [1Y6]

Definition 3.141. [16G]

In practice, the definition of function is always written as $f : A \rightarrow B$; for this reason the graph is defined as

$$F = \{(a, b) \in A \times B : b = f(a)\} .$$

Remark 3.142. [08X]
